

## REMARKS

Claims 11-13 are in the case.

In an Office Action dated October 23, 2002, the following rejections to claims 4-10 were made: Claim 10 stands rejected under 35 U.S.C. 112, first paragraph as containing subject matter not described in the specification. Claims 4-10 stand rejected under 35 U.S.C. 112, second paragraph, as being indefinite. Claim 4 stands rejected under 35 U.S.C. 102(b) as being anticipated by Buch. Claims 5 and 7 stand rejected under 35 U.S.C. 103(a) as being unpatentable over Buch. Claims 6 and 8-10 stand rejected under 35 U.S.C. 103(a) as being unpatentable over Buch and Chiang et al.

In the Office communication referred to above, the Examiner objected to the Amendment mailed on January 23, 2003 (which responded to the October 23, 2002 Office Action) as informal or not fully responsive as failing to clearly point out the patentable novelty which they think each of the claims present. Below is a discussion of the present claims with respect to the prior art of record.

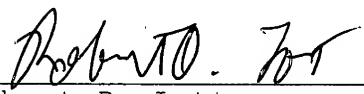

The rejections under 35 U.S.C. 112, second paragraph, have been, it is believed, obviated in the new claims.

The rejections under 35 U.S.C. 102 and 103 are believed obviated by claim 11. Claim 11 requires a car drive motor, solenoids, switches and door moving motors. In addition, an

electrical control unit which includes a mother board and some daughter boards connected to the drive motor, solenoids, switches and door moving doors; and a self-locking memory circuit. Neither Buch or Chiang et al. teach or suggest such an arrangement. It is an advantage of the present invention that the electrical noise generated by motors, solenoids and switches can be tolerated by the self-locking memory circuit.

If, at any time, the Examiner in charge of this application feels that prosecution of this application could be expedited through a telephone interview, the Examiner is invited to contact the undersigned by telephone at (412) 380-0725.

Respectfully Submitted,
